"SHORT BORE" OPEN MAGNET

- ◆ Siemens Espree 1.5 Tesla
- ◆ High Field Short Bore Magnet
- ◆ Strength & Speed of Traditional Closed
- ◆ Stealth Imaging Protocols
- ◆ Convenience of an open magnet
- ◆ Short bore is wider, giving larger and claustrophobic patients more space
- ◆ Weight limit up to 550 lbs.
- ◆ Great selection for neuro, ortho, angiography, abdomen/pelvis and soft tissue studies
- ◆ Radio and CD player available

Personal experience from some of our patients....

"...that was the fastest MRI I have ever had done..." "...being able to listen to the radio helped relax me..." "...the techs took their time and explained the procedure to me...they went the extra mile to make me comfortable..." "...the leg cushion, pillow and blanket made me feel like I could take a nap!" "...I was able to lay on my side for my MRI (lumbar) since I was in too much pain to lay on my back..." "...I was very nervous but the tech took her time to explain to me what was going to happen and the time it would take...she gave a buzzer to hold in case I needed her..."
